"Genome sequence of the endocellular bacterial symbiont of aphids

Buchnera sp. APS.";

Nature 407:81-86(2000)

-: FUNCTION: THE REACTION CATALYZED BY TOPOISOMERASES LEADS TO THE

CONVERSION OF ONE TOPOLOGICAL ISOMER OF DNA TO ANOTHER.

-:- CATALYTIC ACTIVITY: ATP-INDEPENDENT BREAKAGE OF SINGLE-STRANDED

DNA, FOLLOWED BY PASSAGE AND REJOINING.

1. MISCRITANEOUS MENN A TOPOLOGICAL SUBBULLATIVE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TOP1_BUCAI

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

xyproline residue is present in the kininogen by wallingth, is a potent varyordine residue is present in the kininogen by wallingth. It is a potent varyordine residue is present in the kininogen prior to the release of bradykinin. C;Superfamily: kininogen; cystatin homology C;Keywords: alternative splicing; blood coagulation; cysteine proteinase inhibitor; dupl F;1-18/Domain: signal sequence #status predicted <SIG>
F;19-619/Product: HMW kininogen II heavy chain #status experimental <HCH>

C;Comment: The HMW kininogen precursor is produced from the same gene as the LMW form a C;Comment: Kininogen is a cysteine proteinase inhibitor, takes part in initiation of the C;Comment: The glycine/histidine/lysine-rich region of HMW kininogen light chain is important in the glycine/histidine/lysine-rich region of HMW kininogen light chain is important: Bradykinin, released from kininogen by kallikrein, is a potent vasodilator, casidne is present in the kininogen prior to the release of bradykinin.

HUNCTION: (1) KININGENS ARE INHIBITORS OF THIOL PROTEASES; (2)
HWA-KININGEN PLAYS AN IMPORTANT ROLE IN BLOOD COAGULATION BY
HELPING TO POSITION OPTIMALLY PREKALLIKREIN AND FACTOR XI NEXT
TO FACTOR XII; (3) HWW-KININGEN INHIBITS THE THROMBIN- AND
PLASMIN-INDUCED AGGREGATION OF THROMBOCYTES; (4) THE ACTIVE
PETTIDE BRADYKININ THAT IS RELEASED FROM HWW-KININGEN SHOWS
A VARIETY OF PHYSIOLOGICAL EFFECTS; (4A) INFLUENCE IN SMOOTH
MUSCLE CONTRACTION, (4B) INDUCTION OF HYPOTENSION, (4C)
NATRIURESIS AND DIURESIS, (4D) DECREASE IN BLOOD GLUCOSE LEVEL,
(4E) IT IS A MEDIATOR OF INFLAMMATION AND CAUSES (4E1) INCREASE
IN VASCULAR PERMEABILITY, (4E2) STINULATION OF NOCICEPTORS (4E3)
RELEASE OF OTHER MEDIATORS OF INFLAMMATION (E.G. PROSTAGLANDINS),
(4F) IT HAS A CARDIOPROTECTIVE EFFECT (DIRECTLY VIA BRADYKININ

OCTION INDUCEDITY OF AND CREASE OF AND CAUSES (4E3)
